

**JUNAIR
AMERICAS**

The new 4-Series down draft combination spraybooth oven from Junair sets a new benchmark in refinishing performance and efficiency. Incorporating a whole range of innovative features, the 4-Series booth offers your bodyshop substantial reductions in energy consumption and costs, reduced booth cycle times and an improved working environment for your technicians.

“ The airflow efficiency is excellent. The flash-off on base coat is much faster and we estimate we are gaining 15 minutes on every job on base coat alone. ”

Dave Kedward, BP Motors, Cheltenham

The 4-Series Spraybooth Oven from Junair

A winning combination of superior performance and energy efficiency

Designed with attention-to-detail – built to last

The quality construction of the new 4-Series spraybooth is the result of ongoing research and development and close collaboration with customers and paint manufacturers alike. A bright, white polyester paint finish on the galvanised steel substrate provides excellent corrosion resistance and a lighter working environment. Vehicle doors open out wide for easy loading and unloading. The doors are fitted with large glazed panels for exceptional visibility, both from inside and outside the spraybooth cabin. Heavy-duty and ‘oversize’ door hinges are built to give years of reliable, trouble-free operation.

Reduced energy consumption saves you money

The Junair 4-Series spraybooth is designed with greater energy efficiency and productivity in mind. Energy-efficient motors are fitted as standard. When specified with QADs™ auxiliary air movement system, 4 speed variable frequency drives, which automatically vary the airflow to suit the process, and Fuel Saver (FS) Mode, dramatic **energy savings of up to 70%** can be achieved.

Direct Gas Firing
**SAVES 30%
ON FUEL COSTS**
(compared to indirect fired systems)

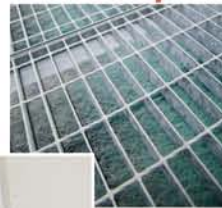

Lighting that leaves others in the shade

The Junair 4-Series spraybooth oven boasts the latest technology in lighting with a new, purpose-designed Ultralux system. Behind the modern, slim-line profile, energy efficient T5 fluorescent tubes and high frequency electronic components combine to reduce energy costs. Illumination quality is superb. Lighting levels of up to 1500 lux are consistently achieved, even when measured low down in the booth. Easy access is provided to the lighting and inexpensive replacement tubes keep maintenance costs low.

Outstanding performance from top to bottom

The Junair 4-Series booth features a full length, full width ceiling input filter. The extra width is made possible by an innovative lighting system that takes up minimal ceiling area. The wider filter provides superb down draft air movement. Overspray is dispersed faster and mist clearance times are reduced by up to 50% compared to spray booths with standard sized ceiling filters.

When specified with the EVAC fully gridded, fully extracted floor the new 4-Series spraybooth offers the ultimate in extraction performance, improving airflow and reducing overspray.

Technology that puts you in control

Operated via a touch screen, Junair’s I System control panel combines PLC and HMI technology to give you the most effective spraybooth/oven control system available.

Incorporating a patented Select Control function, each paint type has its own pre-programmed profile, assuring consistently superb results.

CUTS ENERGY COSTS BY UP TO 40% - REDUCES CYCLE TIMES BY 35%

QADs™ is an advanced system that supplies additional airflow from the corners of the spraybooth cabin. The clean, filtered and heated air delivered by QADs™ provides the ideal environment for the fast, controlled flash-off of waterborne base coats and the rapid through-curing of low VOC top coats.

QADs™ reduce overall paint drying and curing process times by around 35%, enabling your spraybooth to handle many more jobs, increasing your production capacity and revenue. Savings in process times are reflected in substantial savings on your energy costs – amounting to thousands of dollars throughout the lifetime of your spraybooth.

All the support you need – when you need it

With qualified and experienced distributors, reliable and highly responsive support is all part of the Junair service. All Junair spraybooth ovens are backed by a high standard of customer care through our own team of service and support staff in addition to our qualified distributors. They can provide maintenance, servicing and calibration, mist clearance testing, load testing, inspection documentation and, of course, a fast, reliable supply of parts.

OPTIONAL
3
YEAR
WARRANTY
on
4 Series
Spraybooths

A comprehensive warranty

Junair 4-Series booths come with a 12-month warranty as standard. An optional 3-Year Warranty complete with a comprehensive support package is also available. Ask us for details.

Premium performance and quality at competitive prices

The Junair 4 Series spraybooth is manufactured under license here in North America by Spray Enclosure Technologies at its modern, efficient production facility in Rialto, California. So you get all the benefits of European technology without the high prices.
